

## Information Governance and Business Intelligence

---

All processes have inputs and outputs. A system is termed stable if the outputs can be easily mapped to all the inputs. At Radus Software, we believe that the same is true for information management. No matter how sophisticated the Business Intelligence tools are that output data, the Information Governance process and Data Quality of the input data dictates the usefulness of the results.

Information Governance is the process that regulates management of information in an enterprise and Business Intelligence are the tools and techniques that guarantee the delivery of quality information on demand. The experts at Radus Software have developed a logical and proven approach, which utilizes best practices, repeatable processes, tools and techniques to help attain a level of maturity wherein you will not only have access to information on demand, but will also have information that can be trusted.

Radus Software is the Information Governance expert. We have the expertise in planning, delivery and standardization to drive Information Governance success. Radus Software offers a full range of consulting and professional services to assist you through all phases of an Information Governance project. Based on our proven methodology, these services represent years of accumulated knowledge and experience, gained through several successful engagements, resulting in improved ROI and measurable results. Radus Software consultants are experts who can help you build your solution with confidence. Our consultants have completed successful projects in various industries, including Government Healthcare, Banking, Insurance, Consumer Products, Retail, Telecom, Life Sciences, Energy, and Automotive.

### ***Productivity and Return on Investment***

With critical business information becoming the key success factor for organizations worldwide, it is imperative for decision makers today to have fast, easy access to strategic information. Adapting information systems infrastructure to rapid changes in business environment and processes is the need of the hour. Access to updated information on key business performance indicators gives opportunities for more informed decisions.

Radus Software's Business Intelligence Service offering is designed to help organizations to achieve these objectives by optimizing the way they collect, synthesize and analyze strategic organizational information and increase the "IQ" of the enterprise. By choosing Radus Software's

BI solution, organizations can respond with speed and precision when making business decisions in today's dynamic and constantly changing business climate, enabling them to convert their raw data into Business Intelligence. We believe that enabling Executives and Managers with the necessary, reliable information in a timely manner, we can help to facilitate improved decision-making capabilities.

### ***Vendor Neutrality***

Radus Software is a not Business Partner with the any of the Business Intelligence vendors, but instead works collaboratively with the vendors in developing solutions that best fit your enterprise needs. This helps us develop solutions that are not skewed to the capabilities of a tool or vendor. Our collaborative efforts with the vendors help us receive direct technical support, which is not available to the general public. Our position of neutrality also helps us to provide impartial opinions to our clients based solely on need and fit, as opposed to "pushing" or selling a specific tool.

### ***Why Radus Software Is Uniquely Qualified***

Our experience with Information Governance indicates that it is an extremely powerful capability with tremendous potential to leverage a return on investment for businesses of any size. However, in order to maximize this potential, Information Governance needs to be introduced in a strategic manner, which will allow the full benefits to be realized. In other words, to optimize the investment in Information Governance, an organization needs to plan for and introduce it in an upward-trending maturity model. This allows organizations to fully explore the information available to them and best ascertain what will most effectively meet their needs.

The depth of experience of Radus Software staff provides a full range of capabilities, from strategic positioning of Information Governance in an organization, to implementation of data management and Business Intelligence infrastructure. This approach is in contrast to other firms who might provide services in an organization to introduce a reporting solution via a Business Intelligence tool, but fail to develop a corresponding *strategy* that raises the information governance maturity throughout the enterprise.

On Feb 22, 2008, Radus Software, LLC ([www.radussoftware.com](http://www.radussoftware.com)) was certified to participate in the Small Business Administration's 8(a) Business Development Program. The certification will allow Radus to receive business development assistance and to bid on contracts that are specifically for SBA 8(a) participants. Concurrent with the 8(a) certification, Radus has also been certified for participation in the Small Disadvantaged Business (SDB) program
