SUCCESS STORY

Program Management and Solution Architecture Support: Radus Provides Technical Support for the Design and Integration of the Corporate Work Plan (CWP) System with Oracle COTS Products

Challenge

Prior to the Radus team's involvement, data relating to the CWP system existed in multiple disparate databases. There was lack of integration and data was replicated across multiple databases. This resulted in duplication of data. The CWP system was a mixture of custom and COTS products developed in different technologies and platforms. This resulted in a stove-piped application that had very poor system performance.

Solution

The Radus Team was an integral part of the Strategic Group that worked to build a business case and systems modernization recommendation to streamline the manually intensive processes. Our Team reviewed the current challenges with CWP and developed a focused set of functional and technical requirements to evaluate potential technologies against. Radus used a proven methodology to conduct the evaluation and recommended an integrated solution to provide unified data collection, high quality reporting, business process automation, and security. This systems modernization effort will transform the current disparate technologies and data to a streamlined and scalable system.

WHY RADUS?

People:

Radus employees deliver success. Our PMI certified project managers and IT Architects and Developers are the best in the industry. All consultants are trained in the entire SDLC process.

Processes:

Radus brings all the necessary aspects of planning, design, development and implementation. Our approaches not only adopt industry standard practices, but extend them following a structured methodology for delivering projects on time, within budget and with exceptional quality.

Technology:

Radus understands that technology is constantly evolving, however IT budgets may not keep pace. Our consultants are focused on driving efficiencies and increasing productivity whether moving to an emerging technology, a proven technology, or making improvements to a legacy system.
